RE: Jeffrey Fenton, [REDACTED]

To Whom It May Concern:

Jeffrey Fenton has been a patient under my care since 2012. He is treated for a severe Generalized Anxiety Disorder, Attention Deficit Disorder, and suffers from an Obsessive Compulsive Personality Disorder. He also has specific phobias regarding weather, driving across bridges, and flying, along with obsessive concerns over his health.

His symptoms of severe anxiety, obsessive worry, preoccupation with details and rules, perfectionism, inflexibility, and problems with rigidity have all interfered with his ability to hold a job and have a healthy relationship.

I have prescribed medication including Lexapro 40 mg a day, Vyvanse 70 mg a day, Xanax 1 mg every six hours as needed, and Restoril 30 mg at night for chronic insomnia. He also has continued to see Terry Huff, LCSW, in psychotherapy. Despite his compliance with his medication and therapy, his symptoms continue to be disabling.

Please consider Mr. Fenton's severe psychiatric condition in any judgments being made about his ability to work and his ongoing divorce. If you have any questions regarding his treatment or prognosis, please contact me with his permission.

Sincerely,

Richard E. Rochester, M.D.

To Whom It May Concern:

RE: Jeffrey Fenton, [REDACTED]

Jeff Fenton has been a patient under my care since February 2012. He has been diagnosed with a Generalized Anxiety Disorder, Attention Deficit Disorder, and some Obsessive Compulsive Personality traits. He has been complaint with both his psychiatric medications prescribed and his individual psychotherapy with Terry Huff, LCSW.

The symptoms of his illnesses have interfered with his ability to maintain employment, despite compliance with our treatment recommendations. His condition does not predispose him to any violent behavior and, to my knowledge, he has not been involved in any violent behavior since being a patient under my care.

If you have any further questions regarding his diagnosis, treatment, or prognosis, please contact me with his permission.

Sincerely,

Richard E. Rochester, M.D.

To Whom It May Concern:

RE: Jeffrey Fenton, [REDACTED]

Jeff Fenton has been a patient under my care since February 2012. He has been diagnosed and treated for a Generalized Anxiety Disorder, Attention Deficit Disorder, and Obsessive Compulsive Personality Disorder. He has been compliant with all my treatment recommendations and medications.

His condition is currently stable on escitalopram 40 mg a day, lamotrigine 100 mg a day, Adderall XR 60 mg a day, alprazolam 0.5 mg to 1 mg q.i.d. and temazepam 15 mg to 30 mg nightly as needed for insomnia. He has no side effects of his current medication regimen, which he has been on now for several years. At no time has he abused his medication. However, due to the severity of his condition, he has been unable to work and hold any full time employment.

If you have any questions regarding my diagnosis or treatment, please contact me with his permission.

Sincerely,

Richard E. Rochester, MD

July 29, 2019

To Whom It May Concern:

I have been seeing Mr. Jeff Fenton in individual psychotherapy from May 3, 2018 to present. He has also been a participant in my support group for adults with ADHD (attention deficit hyperactivity disorder). During this period I have never had any suspicion, or reason for concern, that Mr. Fenton is at risk for harming himself or others.

Respectfully,

Terry M. Huff, LCSW

To Whom it May Concern:

I'm writing at the request of my client, Mr. Jeff Fenton, to explain his mental health challenges and their effects on his general functioning. I am licensed as a clinical social worker in Tennessee, and I have a private psychotherapy practice in Brentwood. I have been providing psychotherapy services for thirty years. My specialty is in helping adults with attention deficit hyperactivity disorder (ADHD).

I began seeing Mr. Fenton May 3, 2018. His primary concerns for which he sought my help were marital problems and effects of his ADHD. He has a history of particular difficulties with occupational functioning due to extraordinary perfectionism and getting lost in details, which contribute to inefficiency and missed deadlines. This particular challenge, along with certain other features, are consistent with symptoms of obsessive compulsive personality disorder. ADHD and OCPD have been the focus of Mr. Fenton's psychotherapy. He also has specific phobias and social anxiety, which have not been the primary focus in therapy.

ADHD is a neurological condition that makes it difficult to manage one's attention and inhibit impulses. It is often misperceived as an inability to focus rather than difficulty managing and shifting the focus of one's attention. Adults with ADHD often have difficulty returning to open awareness when locked into a focused state of awareness. They often have trouble activating and sustaining effort on monotonous tasks, organizing and prioritizing tasks, keeping track of items needed for tasks, estimating and tracking time, managing emotions skillfully, inhibiting speech and action (tending to talk excessively and interrupt others), and inhibiting impulses.

Obsessive Compulsive Personality Disorder is characterized by "preoccupation with orderliness, perfectionism, and mental and interpersonal control, at the expense of flexibility, openness, and efficiency," according to the DSM-5 (Diagnostic and Statistical of Mental Disorders - 5th edition). Individuals with this disorder try "to maintain a sense of control through painstaking attention to rules, trivial details, procedures, lists, schedules, or form to the extent that the major point of the activity is lost." They may get so caught up in the details of a project that they don't complete it, or they miss deadlines. It can take them a long time to complete a task due to this excessive preoccupation with details. They are often "inflexible about matters of morality, ethics, or values and may force themselves and others to follow rigid moral principles and very strict standards of performance." They often have trouble delegating tasks to others, as others must conform to their way of doing things. Those tasks must be done "correctly." They tend to "plan ahead in meticulous detail and are unwilling to consider changes." Their ability to compromise may be compromised by the inflexibility. They are uncomfortable with relationships and situations in which they are not in control or where they must rely on others. They are uncomfortable with the unpredictable.

One effect of the OCPD is Mr. Fenton's communication when dealing with conflict. His excesses in speech and writing can appear imposing or hostile. He acknowledges his compulsion to communicate excessively. The compulsion is driven by an undercurrent of unsettled feelings that persist until he is certain there is no possibility of being misunderstood. This pattern is consistent with the disorder (OCPD). His effect on others—i.e., anyone receiving the excess of communication—is often lost on him, as his attention is locked into the effort to be understood. Consequently, those efforts are experienced by others as intense and sometimes hostile.

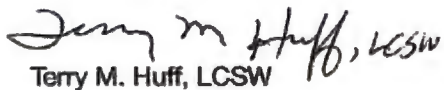

Mr. Fenton is aware that he has more work to do on this problem. He recently requested that we focus less on the present crisis and more on managing the challenge of coping effectively with the symptoms ADHD and OCPD, and decreasing self-defeating behavior. Due to both conditions, Mr. Fenton's excessive attention to what he wants to communicate obstructs him from being aware, in a given moment, of effects of his efforts (e.g., the impact of the volume of his voice when speaking, or the volume of information when writing).

Mr. Fenton has been forthcoming in psychotherapy sessions and has been open and willing to be challenged with respect to his symptoms and their effects. He acknowledges mistakes when they are pointed out and is working to understand how his best intentions sometimes go awry, and his persistent efforts can be self-defeating.

Mr. Fenton has never expressed any intention of harming himself or others during the sixteen months that I have known him. I have never had reason to suspect any intention to harm himself or others. He has participated frequently in a support group for adults with ADHD. He has participated actively and has offered help to others in the group.

Thank you for consideration of the role that mental health and disability have played out in Mr. Fenton's life and relationships. His participation in psychotherapy and related services will continue.

Respectfully,

Terry M. Huff, LCSW
